

## Orthopedic Plate, IM Pin, or Nylon Suture Removal Surgical Release

Owner: \_\_\_\_\_ Patient: \_\_\_\_\_ Date: \_\_\_\_\_

Referring Hospital: \_\_\_\_\_ Veterinarian: \_\_\_\_\_

Surgery to be performed: \_\_\_\_\_

I have discussed the aforementioned surgery and the importance of pre-surgical blood testing with the referring veterinarian. I understand that there are risks and hazards involved with the recommended surgical procedure, including anesthetic risk. I realized that no guaranty or warranty can ethically or professionally be made regarding the results or cure.

I authorize the surgeons and/or associates (Drs. Harper and Franklin) of Texas Specialty Veterinary Services, PLLC to perform surgery on my pet. I am also aware that Dr. Harper is board certified in large animal surgery only but have retrained in small animal surgery as well, therefore, offers their services to small animal clients and their animals. I have also been made aware that Dr. Franklin is small animal surgery residency trained, but has not become board certified at this time. At this time Dr. Franklin's title is Practice Limited to Surgery. I understand that there are other board-certified surgeons in small animal available in the area.

The undersigned owner or authorized agent of admitted patient \_\_\_\_\_ hereby authorize the admitting veterinarian (and his/her designated associates or assistants) to administer such treatment as is necessary to perform the below-mentioned procedure. The nature of the procedure(s) has been explained to me and no guarantee has been made as to results or cure. I understand that there may be risk involved in these procedures.

I consent to the administration of such anesthetics or tranquilizers as are necessary.

Anesthetic Risks: (Although every effort is made to make anesthesia as safe as possible including vital sign monitoring and use of the most up to date anesthetic agents and equipment, I understand that anesthesia carries inherent risks) The incidence of complications from anesthesia are extremely low and we do not anticipate any complications in your pet but on rare occasions the following can occur:

1. Allergic reaction to the anesthetic agents
2. Heart rhythm abnormalities

3. Untoward reactions to the gas including drops in blood pressure or respiratory difficulties
4. Just like in humans, on very rare occasions, general anesthesia can result in death.

Procedure: IM Pin removal, Nylon suture removal or Osteophyte Removal

Surgical Risks:

1. Infection
2. Refracture of bone (rare)
3. Seroma (pocket of fluid at incision) that resolves over time
4. Transient pain in limb
5. Continued pain from scar tissue and osteophytes that formed around proximal pin near stifle joint
6. Inability to safely remove all osteophytes at proximal pin
7. Continued lameness after removal of nylon from stifle due to alternative cause.

My pet is having surgery today on the Right / Left / Both legs (please circle correct leg).

Texas Specialty Veterinary Services (TSVS) occasionally features patients on its Facebook page, YouTube channel, other social media sites, and in publications (print or online). With your permission, we may share your pet's picture, video or story. We may mention your pet by name, but never the owner's name. TSVS would be grateful that you'll be helping other pets by educating pet owners, veterinary technicians and veterinarians.

Please initial to allow TSVS to mention your pet \_\_\_\_\_
